

FortiAnalyzer™-400B

Centralized Logging, Analysis, and Reporting

Datasheet

Centralized Management Solutions for Fortinet Systems

Knowledge is Power

To meet the growing demand for Web-enabled applications and new IP-based services, such as multimedia messaging, voice over IP (VoIP), and video applications, enterprise networks are rapidly growing in size and complexity. As a result, monitoring and enforcing acceptable use policies, identifying and blocking emmerging security threats, and complying with emerging governmental regulations requires sophisticated logging and reporting capabilities. Both real-time and historical views of network usage and security information are essential for discovering and addressing vulnerabilities across dispersed networks and user groups. The ability to capture network event, usage and content information for forensic purposes, and to comply with governmental regulations regarding privacy and disclosure of security breaches, is absolutely critical. Network and security administrators need a comprehensive set of logging and reporting tools that provide the knowledge required to implement a complete multi-layered security solution.

Solutions for Dynamic Security Management

The FortiAnalyzer family of real-time network logging, analyzing, and reporting systems are a series of dedicated network hardware appliances that securely aggregate log data from Fortinet devices and third-party devices. A full range of log record types may be archived, filtered, and mined for compliance or historical analysis purposes. A comprehensive suite of standard graphical reports are built-in to the system, which also offers the flexibility to customize reports to specific needs. FortiAnalyzer solutions also provide advanced security management functions such as: quarantine archiving, event correlation, vulnerability assessments, traffic analysis, and archiving of email, Web access, instant messaging, and file transfer content.

FortiAnalyzer-400B

Knowledge is the Key to Dynamic Security Management

Security threats are becoming much more dynamic with attacks now using multiple vectors to penetrate, then exploit their intended targets. Businesses must immediately recognize new vulnerabilities or attacks and implement protective measures before the damage is done. FortiAnalyzer systems are a critical component of the comprehensive Fortinet security solution, providing enterprise-class logging and reporting features necessary to discover, analyze, and mitigate threats. The FortiAnalyzer system's forensic analysis tool enables detailed user activity reports, while the vulnerability assesment tool can automatically discover, inventory and assess the security posture of servers and hosts. Complete the Fortinet security management solution with a FortiManager system for comprehensive and seamless centralized management for your entire network.

Key Features and Benefits

•	Network Event Correlation	Allows IT administrators to more quickly identify and react to network security threats across the network.
•	Streamlined Graphical Reports	Provides network-wide reporting of events, activities and trends occurring on FortiGate® and third party devices.
•	Scalable Performance and Capacity	FortiAnalyzer family models support thousands of FortiGate and FortiClient™ agents.
•	Centralized Logging of Multiple Record Types	Including traffic activity, system events, viruses, attacks, Web filtering events, and messaging activity/data.
•	Centralized Content Archiving with Centralized Quarantine	Provides reliable archiving of content data, such as email content, IM chat and file transfers, as well as a centralized quarantine repository for infected files.
•	Centralized Log Aggregation	Supports flexible deployment scenarios, such as deploying lower cost models in regional offices, and aggregating logs to centralized office.
•	Seamless Integration with the Fortinet Product Portfolio	Tight integration maximizes performance and allows FortiAnalyzer resources to be managed from FortiGate or FortiManager™

user interfaces.

Technical Specifications

SYSTEM SPECIFICATIONS

Number of Licensed Network Devices	200
Number of Licensed FortiClient Agents	
Number of FortiMail Devices	100
Operating System	Hardened FortiAnalyzer OS
Recommended FortiGate Models	Any FortiGate model

HARDWARE SPECIFICATIONS

10/100/1000 Interfaces (Copper, RJ-45)	4
Hard Drive Bays	2
Hard Drive Included	1 x 500 GB
RAID SupportYes	(RAID 0 or 1, with optional second drive)
Dimensions	
Height	1.7 inches (4.5 cm)
Width	17.25 inches (43.8 cm)
Length	14.5 inches (36.8 cm)
Weight	10 lbs (4.5 kg)
Rack Mountable	Yes
Input Voltage	100-240V AC
Input Current	4.0 A (Max)
Average Power Consumption (Avg)	121 W

ENVIRONMENTAL

Operating temperature:	32 to 104 deg F (0 to 40 deg C)
Storage temperature:	13 to 158 deg F (-25 to 70 deg C)
Humidity:	5 to 95% non-condensing

REGULATORYFCC Class A, Part 15, UL/CUL, C Tick, CE, VCCI

GENERAL SYSTEM FUNCTIONS

Profile-Based Administration

Secure Web Based User Interface Encrypted Communication & Authentication Between FortiAnalyzer Server and FortiGate Devices
